

FIXED SHAPE RETAINER FOR ABSORBENT MATERIAL FOR STORM DRAINS

ABSTRACT

The present invention is directed to a retainer assembly for anchoring
5 environmental containment and remediation materials in a desired location. The retainer
assembly includes a buoyant retainer structure and an anchor assembly attached thereto.
The anchor assembly defines the limits of motion of the retainer in three dimensions with
respect to a selected anchor point and permits the anchor assembly to float within these
limits. The anchor assembly also includes an attachment mechanism to secure the
10 remediation materials to the retainer structure.
